Preamble

What does the Measuring Our Vision Report tell us about MaineHealth's progress toward achieving our vision of working together so our communities are the healthiest in America? The data show us that counties within the MaineHealth Service Area are challenged with underlying social and economic factors that hold us back from achieving our vision:

- For instance, high **rurality** and **poverty** as well as barriers to improving the **social drivers of health**, such as food security, transportation, and housing, serve as an undertow.
- These factors are in turn associated with high rates of unhealthy risks and behaviors, including **self-reported mentally unhealthy days, substance and alcohol misuse, tobacco addiction, and physical inactivity**.
- These in turn contribute to high rates of **depression, cancer, chronic respiratory diseases, multiple chronic conditions, suicides, and overdose deaths**.

However, the data also show several successes that exemplify our vision. For instance:

- Maine's low rate of **preventable hospital stays** reflects widespread access to high-quality primary healthcare, which improves quality of life for patients receiving care in the community while reducing healthcare costs.
- Low rates of **teen births** and **sexually transmitted infections**, within the MaineHealth Service Area, are the result of several decades of intentional and strategic partnerships among healthcare partners including family planning, youth, parents, schools, and policymakers, and collaboration on a wide range of strategies.
- High **colorectal cancer screening rates** within Maine are an example of healthcare and community partners working together to educate and screen patients.
- The **rate of adults smoking regularly** within the MaineHealth Service Area is decreasing at a faster rate than some other states. Our rate is in the third quartile for 2019-2021, while in 2017-2019 we were in the fourth (least healthy) quartile. Maine has one of the largest percentage of adults who are former smokers in the U.S. and had one of the largest decreases in high school smoking rates from 1997 to 2021; these data demonstrate the effective multi-sector approach used across Maine for decades to both prevent youth from initiating smoking and helping those dependent on tobacco to quit.
- **Let's Go! and its many partners statewide have helped to influence healthy eating behaviors in our youth**, which in turn will help reduce the burden of obesity in Maine's communities. In 2021, Maine had the lowest rate nationally of children ages 1-5 who had 1+ sugar-sweetened beverages in the preceding week, and the third and second lowest rates of young children who eat fruit and vegetables less than daily, respectively.
- Maine ranks 1st nationwide on **population covered by non-smoking regulations** and **climate change policies**, showing the impact of healthcare and other partners working with policymakers. MaineHealth has a long history of advocating for public health policies.

These successes also hold some insights about how we as a health system can address our challenges and achieve our vision of ***Working together so our communities are the healthiest in America.***

Executive Summary

MaineHealth has a bold vision of *Working together so our communities are the healthiest in America*. Health is broadly defined using the World Health Organization’s definition: “Health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.” Thus, to improve the health of the communities we serve, MaineHealth implements a multi-pronged approach: i) **clinical care** improvement strategies; ii) **community-based engagement** initiatives to increase healthy behaviors and help people access clinical care and social services; and iii) advocacy efforts to improve **health-related policies** at the local, state, and federal levels.

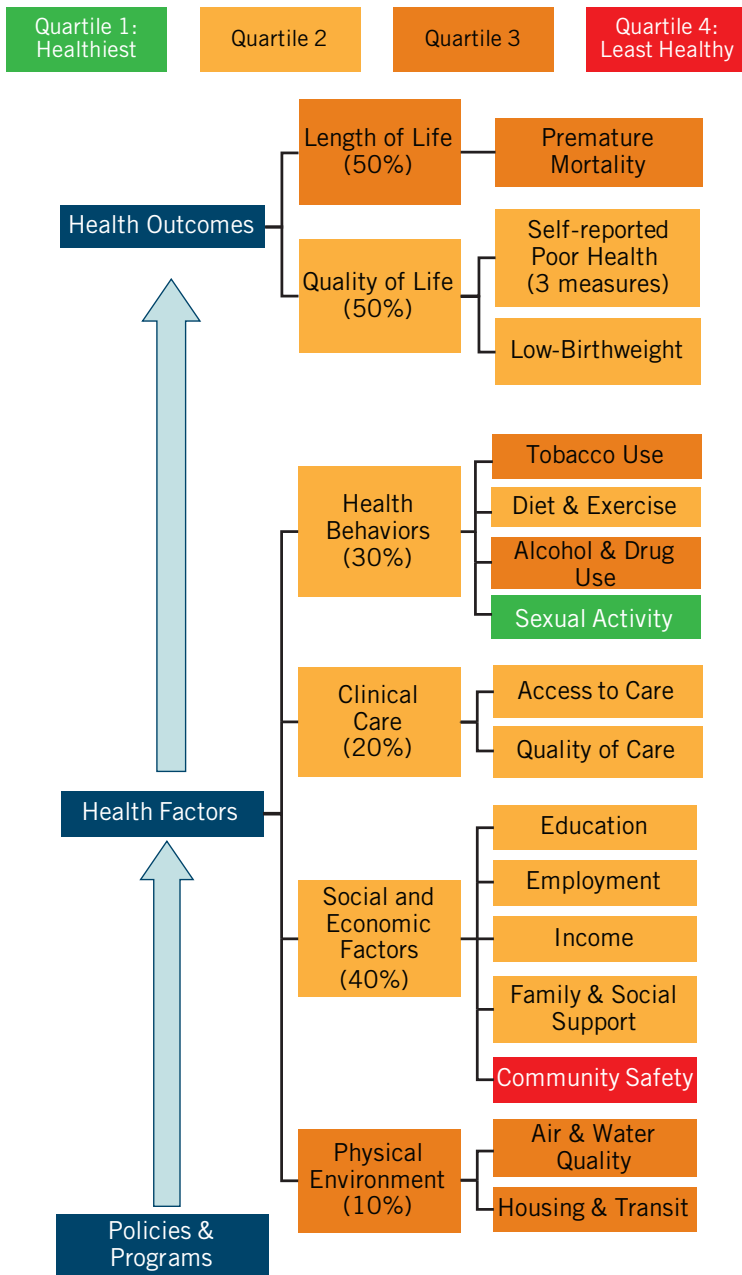

MaineHealth currently monitors progress toward achieving this vision by using established frameworks and indices, primarily the County Health Rankings and America’s Health Rankings data and reports. Both ranking systems consider social and economic factors and the physical environment, which have been shown to have a larger impact on individuals’ health outcomes than clinical care interventions do alone.

The Measuring Our Vision Report uses the County Health Rankings model (pg. 5) to compare the health data for the twelve-county MaineHealth Service Area, as a region, to states within the U.S.. In addition, given the large impact of social and economic factors on health and that there is variation in these factors across the twelve counties within the MaineHealth Service Area, each county’s health outcomes are compared to 33-35 peer counties throughout the United States. MaineHealth Service Area counties are also compared to their peers on measures related to health behaviors (pg. 15). This allows us to assess health status in each county within the MaineHealth Service Area compared to other counties where the demographic, social and economic factors are similar. This approach ensures that the impact of these factors should be similar across peer county groups (without clinical, community or health-policy interventions taking place). The nineteen measures used to identify cohorts of peer counties are included on page 6 as well as details about Maine counties’ peers.

The following pages provide resources from other frameworks and reports of that can be used to assess MaineHealth’s progress toward achieving our vision. Some examples include:

- Leading causes of death and premature death in the MaineHealth Service Area and Maine.
- Highlights of Maine’s strengths and challenges identified by national data sources including Americas Health Rankings, Kids Count, and Measures of Growth.
- Health Index Report Cards that provide county-level data on MaineHealth’s priority health areas. Of note, these report cards present data about changes in rates over time, i.e. trends, providing an important lens for assessing the impact of strategies implemented by MaineHealth. For example, while the rate of cancer deaths in the MaineHealth Service Area significantly higher than the U.S. overall rate, the MaineHealth Service Area rate has decreased significantly in recent years. Meanwhile, the rates of drug overdose deaths and suicides in the MaineHealth Service Area have increased significantly in recent years.

Heat Map of the MaineHealth Service Area Ranks compared to states within the U.S.

MaineHealth Service Area vs. U.S. States

We used County Health Rankings data to assess how the health factors and health outcomes in the MaineHealth Service Area compared to other U.S. states. Detailed results are provided later in this report.

- The least healthy rankings for the Maine Health Service Area, compared to other states, were for **Health Behaviors** among adults- particularly for tobacco use, unhealthy alcohol use, physical inactivity, and access to exercise opportunities.
- Related to **Clinical Care**, the MaineHealth Service Area ranked better on quality of care vs. access to care among states. Of note, the rate of preventable hospitalizations in the MaineHealth Service Area was among the best rates in the U.S.
- The MaineHealth Service Area ranked in the 1st (healthiest) or 2nd quartiles for many **Social and Economic** measures, except for injury deaths under community safety (4th quartile), social associations (3rd quartile), and adults ages 25-44 with some post-secondary education (3rd quartile).
- Examining **Health Outcomes** measures,
 - The median premature mortality rate of the MaineHealth Service Area was higher than the U.S. overall rate (in the 3rd quartile). Note: in the 2022 County Health Rankings, the MaineHealth Service Area’s premature mortality rate was in the 2nd quartile. Looking closer at specific causes of premature deaths (at ages <75 years old) in 2021, the MaineHealth Service Area had significantly higher death rates than the U.S. for poisoning deaths (which include drug overdose deaths) and significantly lower death rates for heart disease and COVID-19.
 - Adults in the MaineHealth Service Area had higher average number of mentally unhealthy days in the past month (3rd quartile).

Two Important Caveats:

- COVID-19: Most health data now include data from during the COVID-19 pandemic. We are still learning about its short-term and long-term impacts on health factors and outcomes.
- DISPARITIES: While this report uses geography to define “communities”, there are systemic barriers that prevent some communities from achieving their full health potential and contribute to inequities in care access and health outcomes. Providing patient-centered care means delivering care that is equitable and flexible; giving patients the care they need when they need it. MaineHealth is building upon existing health improvement work and building system-wide infrastructure that begins to address these barriers and is committed to becoming a trusted and reliable resource for all communities we serve.

Counties in the MaineHealth Service Area vs. Peer Socioeconomic Status Counties from across the U.S.

Recognizing the substantial influence that social, economic, and physical environment factors have on individuals' health, and that these factors vary substantially across the twelve counties within the MaineHealth Service Area, below is an additional analysis of County Health Rankings data to assess how well MaineHealth is achieving its vision.

- For each of the twelve MaineHealth Service Area counties, 5 health outcomes are compared to rates in a group of “peer” counties from throughout the U.S. that had similar social, economic, and educational profiles, based on nineteen different indicators. Each of these measures carries more importance than specific disease rates for each county.
- Counties within the MaineHealth Service Area tended to have better health outcomes compared to their peer counties, with most counties falling in the 1st or 2nd quartiles for all outcomes. The exception to this is low birthweight, where two counties were in the 4th quartile, and mentally unhealthy days, where most MaineHealth Service Area counties are in the 2nd and 3rd quartiles.
- These findings suggest that MaineHealth's and other organizations' multi-pronged approach to improving community health may be having a positive impact.
- More detailed tables and graphs for health outcomes and health behaviors can be found later in this report (pgs. 10-19).

Quartile of MaineHealth Service Area County's Rank Among Peer Counties (based on Social, Economic & Education Factors)					
1st Quartile Healthiest)	Premature Mortality: Years of Potential Life Lost before age 75; per 100,000 population (age-adjusted)	% Adults Reporting Fair or Poor Health (age-adjusted)	Avg. # Physically Unhealthy Days in past 30 days (age-adjusted)	Avg. # Mentally Unhealthy Days in past 30 days (age-adjusted)	Percentage of Live Births with Low Birthweight (< 2,500 grams)
2nd Quartile					
3rd Quartile					
4th Quartile (Least Healthy)

Peer groups of U.S. counties were developed by Community Health Status Indicators based on nineteen different metrics:

- Population size
- Population growth
- Population density
- Population mobility
- Percent children
- Percent foreign born
- Percent high school graduates
- Single parent households
- Median home value
- Housing stress
- Unemployment
- Median household income
- Receipt of government financial assistance
- Gini Index of income inequality
- Overall poverty
- Elderly poverty
- Percent elderly
- Percent owner-occupied housing units
- Sex Ratio

Diet and Exercise	Adult Obesity	% of the adult population (ages 18+) that reports a body mass index (BMI) greater than or equal to 30 kg/m2 (age-adjusted)	2021	34%	32%	2	24%-41%
	Food Environment Index	Index of factors that contribute to a healthy food environment, from 0 (worst) to 10 (best)	2019 & 2021	7.7	8.5	2	4-10
	Physical Inactivity	% of adults ages 18+ over reporting no leisure-time physical activity (age-adjusted)	2021	23%	24%	3	16%-31%
	Access to Exercise Opportunities†	% of population with adequate access to locations for physical activity	2023, 2022 & 2020	84%	51%	4	50%-100%
Alcohol and Drug Use	Excessive Drinking	% of adults reporting binge or heavy drinking (age-adjusted)	2021	18%	18%	3	12%-26%
	Alcohol-Impaired Driving Deaths	% of driving deaths with alcohol involvement	2017-2021	26%	29%	3	18%-46%
Sexual Activity	Sexually Transmitted Infections	# of newly diagnosed chlamydia cases per 100,000 population	2021	495.5	207.4	1	141-1,038
	Teen Births*	# of births per 1,000 female population ages 15-19	2016-2022	17	12	1	6-30
CLINICAL CARE							
Access to Care	Uninsured	% of population under age 65 without health insurance	2021	10%	8%	2	2%-21%
	Primary Care Physicians	Ratio of population to primary care physicians	2021	1,330:1	1,237:1	2	776:1-1,875:1
	Dentists	Ratio of population to dentists	2022	1,360:1	1,774:1	4	775:1-2,181:1
	Mental Health Providers	Ratio of population to mental health providers	2023	320:1	316:1	2	136:1-740:1
Quality of Care	Preventable Hospital Stays*	Rate of hospital stays for ambulatory-care sensitive conditions per 100,000 Medicare enrollees	2021	2,681	1,779	1	1,478-3,958
	Mammography Screening*	% of female Medicare enrollees ages 65-74 that received an annual mammography screening	2021	43%	43%	2	35%-53%
	Flu Vaccinations*	% of fee-for-service Medicare enrollees that had an annual flu vaccination	2021	46%	43%	3	33%-56%
SOCIAL & ECONOMIC FACTORS							
Education	High School Completion	% of adults ages 25+ with a high school diploma or equivalent	2018-2022	89%	94%	1	84%-95%
	Some College	% of adults ages 25-44 with some post-secondary education	2018-2022	68%	66%	3	57%-85%
Employment	Unemployment	% of population ages 16+ unemployed but seeking work	2022	3.7%	3%	2	2%-6%
Income	Children in Poverty*	% of people under age 18 in poverty	2022 & 2018-2022	16%	13%	2	7%-27%
	Income Inequality	Ratio of household income at the 80th percentile to income at the 20th percentile	2018-2022	4.9	4.3	1	3-7
Family and Social Support	Children in Single-Parent Households	% of children that live in a household headed by a single parent	2018-2022	25%	20%	1	14%-45%
	Social Associations	# of membership associations per 10,000 population	2021	9.1	9.8	3	3-30
Community Safety	Injury Deaths*	# of deaths due to injury per 100,000 population	2017-2021	80	107	4	56-143
PHYSICAL ENVIRONMENT							
Air and Water Quality	Air Pollution - Particulate Matter	Average daily density of fine particulate matter in micrograms per cubic meter (PM2.5)	2019	7.4	5.6	2	3-10
	Drinking Water Violations†	Indicator of the presence of health-related drinking water violations: 'Yes' indicates the presence of a violation, 'No' indicates no violation	2022	Yes	Yes	4	Yes/No
Housing and Transit	Severe Housing Problems	% of households with at least 1 of 4 housing problems: overcrowding, high housing costs, lack of kitchen facilities, or lack of plumbing facilities	2016-2020	17%	13%	2	10%-26%
	Driving Alone to Work*	% of the workforce that drives alone to work	2018-2022	72%	75%	3	29%-84%
	Long Commute - Driving Alone	Among workers who commute in their car alone, the % that commute more than 30 minutes	2018-2022	36%	37%	3	15%-50%

*Indicates subgroup data by race and ethnicity is available; †Not available in all states

Maine Shared CHNA – 2022 Priorities Identified by various groups

The following table provides a summary of the top health priorities selected by participants during the community engagement process. The total number of participants in each set of events (or oral survey in the case of the immigrant population) is provided in the column labeled 'N'. The percentages reflect the percentage of participants who selected the issue as a top health priority. The darker the cells are shaded, the higher percentage of participants who selected it as a top health priority. The exception is for the youth event where no formal voting took place. Instead, check marks are used to indicate recurring themes in those discussions

Summary of Strengths and Challenges – Various Maine Reports

Source	Strengths	Challenges
America’s Health Rankings 2023 Annual Report (relative to other States)	<ul style="list-style-type: none"> • High prevalence of high school completion • Low homicide rate • Low incidence of chlamydia 	<ul style="list-style-type: none"> • High prevalence of multiple chronic conditions • High prevalence of frequent mental distress • High Black/white residential segregation
America’s Health Rankings 2023 Senior Report (relative to other States)	<ul style="list-style-type: none"> • Low prevalence of multiple chronic conditions • High volunteerism rate • Low prevalence of avoiding care due to cost 	<ul style="list-style-type: none"> • High suicide rate • High prevalence of excessive drinking • High prevalence of physical inactivity
America’s Health Rankings 2023 Women and Children Report (relative to other States)	<ul style="list-style-type: none"> • High prevalence of high school completion • High voter participation among women • Low incidence of chlamydia among women 	<ul style="list-style-type: none"> • High prevalence of multiple chronic conditions among women • Low enrollment in early childhood education • High prevalence of cigarette smoking among women
County Health Rankings 2024 (MHSa relative to US overall)	<ul style="list-style-type: none"> • Low prevalence of sexually transmitted infections and teen births • High % of people who have completed high school • Low % of people reported fair or poor health • Low preventable hospitalizations • Low income inequality • Low % of children in single parent households 	<ul style="list-style-type: none"> • High rate of injury deaths • High rate of alcohol-impaired driving deaths • Low access to locations for physical activity • Low access to dentists
Maine Kids Count 2023 (annual trends)	<ul style="list-style-type: none"> • Fewer children in poverty • Preschool attendance returned to pre-pandemic rates 	<ul style="list-style-type: none"> • Highest rate nationally of child maltreatment • Higher rates of teen anxiety and depression • Lower rates of early intervention for babies with developmental delays • Lower rate of high school graduation
Maine Youth Risk Behavior Surveillance System 2021 (annual trends)	<ul style="list-style-type: none"> • Lower % of high school students reporting current drinking • Fewer high school students reported being bullied on school property • Fewer high school students reported ever trying cigarette smoking 	<ul style="list-style-type: none"> • More high school student feeling sad or hopeless • Fewer high school students reported being physically active
Maine Measures of Growth 2023 (annual trends)	<ul style="list-style-type: none"> • Annual average wages remain above peer state average, but below national average • Increase in % of adults with postsecondary degrees and/or credentials • Growth in locations with internet, but this growth is uneven across the state • Air and water quality continues to exceed national average 	<ul style="list-style-type: none"> • % of children with mental and/or behavioral health conditions continues to rise • Continued workforce shortages • Home ownership costs not affordable • Decrease in % of 4th graders proficient in reading and 8th graders proficient in math • Cost of energy rising, similar to national increase • Tax burden above New England and U.S. averages • Research and development spending ranks 44th among U.S. states

Summary of Strengths and Challenges – America’s Healthy Rankings and County Health Rankings Components

- **Social and Economic Factors**

- **Strengths:** Maine’s strengths in social and economic factors include high rates of high school completion and voter participation and low rates of homicide (although this will likely change when 2023 data are included). An additional strength, when looking at MaineHealth Service Area counties instead of Maine overall, was a low ratio of income inequality.
- **Challenges:** Maine challenges in this area include high rates of adverse childhood experiences (ACEs) and low rates of fourth grade reading proficiency. In addition, among MaineHealth Service Area counties there are high rates of injury deaths, which include drug overdose deaths and suicides among other causes.

- **Health Behaviors**

- **Strengths:** One of Maine’s and MaineHealth Service Area counties’ biggest strengths under health behaviors is safe sexual activity, including low rates of high-risk HIV behaviors, chlamydia cases, and teen births.
- **Challenges:** Maine has high rates of adult smoking and physical inactivity. Further, a lower % of people in the MaineHealth Service Area counties have access to locations for physical activity compared to the U.S. and tended to have worse rates of heavy and binge drinking among adults and driving deaths involving alcohol.

- **Clinical Care**

- **Strengths:** People in Maine have more access to primary care physicians and mental health providers compared to people in other states, although this varies by county. Further, Maine has higher rates of colorectal cancer screenings (ranked #1 in the U.S.) compared to other states and low rates of adults avoiding care due to cost. MaineHealth Service Area counties also are in the 1st quartile for low rates of preventable hospital stays.
- **Challenges:** Compared to other states, people in Maine have more difficulty accessing dental care. Maine ranks in the middle of other states on prevalence of uninsured adults (26th), though this is improving.

- **Physical Environment**

- **Strengths:** In Maine, air pollution is lower than other states as well as the % of people with severe housing problems. The % of electricity generated through renewable energy is higher and stronger climate and non-smoking policies are in place in Maine compared to other states.
- **Challenges:** Maine has both a higher % of housing with lead risks and population living in areas with climate risks. MaineHealth Service Area counties were in the 3rd quartile for states for both the % of people who commute alone and have a long commute.

UnitedWay ALICE Report

The number of households in financial hardship in Maine continues to be undercounted in official measures. There are many households in the U.S. that have income above the Federal Poverty Level but still struggle to afford basic household necessities. This population is called ALICE (Asset Limited, Income Constrained, Employed). For ALICE households there is a fundamental mismatch between earnings and the cost of basics.

In order to estimate ALICE households, United for ALICE calculated a Household Survival Budget to estimate the minimum costs of household necessities (i.e. housing, child care, food, etc.) in Maine. The Household Survival Budget is adjusted for different counties and household types. Households whose income is below the Household Survival Budget but above the federal poverty level are ALICE. For example, the ALICE Household Survival Budget for a family of four in 2021 was \$70,908 compared to the federal poverty level at \$26,500. For more information about the methodology behind the ALICE Report, go to <https://www.unitedforalice.org/methodology>.

In Maine overall, 12% of households are below the federal poverty level, but an additional 30% of households live above the federal poverty level, but below the ALICE Survival Budget. In total 42% of Maine's households live below the ALICE Survival Budget. At the county level, the highest concentration of households below the ALICE survival budget were in Oxford, with over half of households below the ALICE survival budget, followed by Somerset, Lincoln, and Franklin counties.

How Health Index Priorities Are Selected

The primary role of the MaineHealth Health Index Initiative is helping to inform the strategic direction that MaineHealth takes for improving population health in our communities.

To fulfill this role, we routinely review and update the Health Index priorities. This round of reviewing and proposing a list of priorities began in July 2019. The proposed list of priorities was primarily created with input from the Center for Health Improvement's leaders (the Chief Health Improvement Officer, Senior Directors and Directors). In some cases, additional input was gathered from clinical content experts (e.g. experts about healthy aging issues).

1. Health Index priorities were selected from the three sets of MaineHealth programs and initiatives listed below. The table on page 3 illustrates how the proposed priorities align with them.
 - a. the seven current Health Index priorities;
 - b. priorities selected by the local health systems in their respective community health needs assessment (CHNA) implementation plans, and
 - c. other system-wide foci, such as Diabetes and Falls Prevention among Older Adults'
2. The same five criteria used to select the current Health Index priorities were used in this process:
 - a. Action would contribute to improvements in the health status of the population.
 - » Can relate to general population and specific populations of note (e.g., people with diabetes)
 - » Causal relationships established by scientific evidence
 - » Timeline is realistic
 - b. There is a high likelihood of success.
 - » Previous research or action has demonstrated effect
 - » Cost effectiveness has been or can be demonstrated
 - » Resources exist or can be secured
 - c. Alignment among potential partners exists.
 - » Potential partners exist in clinical and community domains
 - » Common interests or goals can be determined
 - d. Action is consistent with regional, state, and national efforts by provider organizations like MaineHealth
 - » Healthy People 2020
 - » IHI, NCQA
 - » State Health Plan for Maine
 - » Maine Hospital Association
 - e. Action is consistent with the business interests of MaineHealth as a financially viable, nonprofit regional system of health care provider organizations, whose vision is to improve community health.
3. Community HealthImprovement leaders made two recommendations for the Health Index priorities moving forward:
 - a. At any given time, MaineHealth will have at least one priority related to "Child Health" and at least one related to "Healthy Aging". In this proposed list, we are proposing child and adolescent immunizations and falls prevention among older adults. All of the other priorities proposed influence/affect children, youth and older adult populations. Nevertheless, it was considered important to intentionally ensure inclusion of priorities focused on older adults and children in the current and future Health Index priorities.
 - b. Shift to broader health topics as priorities. The original Health Index priorities all had an action phrase (e.g. "Decrease" or "Increase"); we recommended that we remove these phrases.

in the MaineHealth Health Index October 2020	Health Index Priority	selected by MaineHealth local health systems	system-wide foci for MaineHealth
1. Cardiovascular Disease	X		
2. Cancer	X		
3. Diabetes		X	X
4. Behavioral Health			
a. Substance Misuse & Dependence	X	X	
b. Mental Health Conditions			X
5. Healthy Aging: Falls Prevention		X	X
6. Child Health: Child & Adolescent Immunizations	X		X
7. Tobacco & Nicotine Dependence	X	X	
8. Obesity	X	X	
9. Social Determinants of Health		X	X
10. COVID (temporary priority)			X
Remove: Preventable Hospitalizations‡	X		

‡ While we have proposed removing the Preventable Hospitalizations measure, two of the chronic conditions (heart failure and diabetes) included in this metric fall under other priorities proposed in this list; thus we can present admissions rates in in-depth reports about those priorities.

The “preventable hospitalizations” measure is defined as the admission rate for twelve ambulatory care-sensitive conditions; patients provided with high-quality, community-based primary health care for these conditions often can avoid hospitalizations or more severe disease that requires treatment within a hospital. The three conditions with the highest admissions rates are heart failure, bacterial pneumonia, and chronic obstructive pulmonary disease. The remaining nine conditions are angina (when no intervention is completed during the hospitalization), asthma, cellulitis, convulsions, dehydration, diabetes, gastroenteritis, hypertension, and kidney/urinary infections.

About MaineHealth

The MaineHealth system reaches more than 1.1 million residents in central, southern and western Maine and eastern New Hampshire. Our system includes Franklin Memorial Hospital/Franklin Community Health Network, LincolnHealth, Maine Behavioral Healthcare, MaineHealth Care at Home, Maine Medical Center, Memorial Hospital, Mid Coast–Parkview Health, NorDx, Pen Bay Medical Center, Waldo County General Hospital, Southern Maine Health Care, Spring Harbor Hospital and Stephens Memorial Hospital/Western Maine Health Care. MaineHealth affiliates include Maine General Health and St. Mary's Regional Medical Center. Joint Venture Partners include New England Rehabilitation Hospital of Portland. It is also a significant stakeholder in the MaineHealth Accountable Care Organization.
