SYMPTOMS AND LABS
Most sleep disorders are non-urgent. If referring physician deems consult is urgent please contact Dr. Kaminow.

HIGH RISK
SUGGESTED EMERGENT CONSULTATION

MODERATE RISK
SUGGESTED CONSULTATION OR CO-MANAGEMENT

LOW RISK
SUGGESTED ROUTINE CARE

SUGGESTED PREVISIT WORKUP
LABS: sleep studies if applicable, labs to include CBC, CMP, TSH, ferritin

SUGGESTED WORKUP
Send referral information
LABS: sleep studies if applicable, labs to include CBC, CMP, TSH, ferritin

SUGGESTED MANAGEMENT
Send referral information

CLINICAL PEARLS
• Many patients with underlying medical illnesses report insomnia and this can be a common medication side effect as can daytime sleepiness. This should be evaluated prior to sending for neurologic consultation.
• Counseling on sleep hygiene measures is recommended.

These clinical practice guidelines describe generally recommended evidence-based interventions for the evaluation, diagnosis and treatment of specific diseases or conditions. The guidelines are: (i) not considered to be entirely inclusive or exclusive of all methods of reasonable care that can obtain or produce the same results, and are not a statement of the standard of medical care; (ii) based on information available at the time and may not reflect the most current evidenced-based literature available at subsequent times; and (iii) not intended to substitute for the independent professional judgment of the responsible clinician(s). No set of guidelines can address the individual variation among patients or their unique needs, nor the combination of resources available to a particular community, provider or healthcare professional. Deviations from clinical practice guidelines thus may be appropriate based upon the specific patient circumstances.
