

# UROLITHIASIS REFERRAL GUIDELINE

MAINE MEDICAL PARTNERS - UROLOGY • 100 BRICKHILL AVENUE, SOUTH PORTLAND, ME • (207) 773-1728

<div>HIGH RISK</div> <div>SUGGESTED EMERGENT CONSULTATION</div>	<div>MODERATE RISK</div> <div>SUGGESTED CONSULTATION OR CO-MANAGEMENT</div>	<div>LOW RISK</div> <div>SUGGESTED ROUTINE CARE</div>
<div><div>SYMPTOMS AND LABS</div><div>Obstructing stone with</div><div>Fevers, chills, rigors, elevated WBC, infected urine</div><div>Intractable pain, nausea or vomiting</div><div>Signs of acute renal failure</div><div>Solitary kidney</div><div>Immunocompromise</div></div>	<div><div>SYMPTOMS AND LABS</div><div>Flank, abdominal, groin or genital pain that can be reasonably controlled with oral pain medications, and patient desires intervention</div><div>Any ureteral stone above 5 mm in largest diameter</div><div>If stone passage on observation with or without Medical Expulsion Therapy (MET) is not successful after four to six weeks</div><div>Incidentally found on imaging for other conditions and patient desires intervention</div><div>Stones discovered in work up of recurrent urinary tract infections</div><div>Bladder stones</div><div>Non obstructing stone in solitary kidney</div><div>Kidney stone in pregnancy</div><div>Patients with recurrent stone passage</div><div>Patients with known rare stones such as struvite or cysteine</div></div>	<div><div>SYMPTOMS AND LABS</div><div>Stones less than or equal to 5 mm in largest diameter where flank, abdominal, groin or genital pain, nausea and anorexia can be reasonably controlled with oral pain medications</div><div>Uncomplicated (i.e. do not have any of the criteria in the high and moderate risk columns)</div></div>
<div><div>SUGGESTED PREVISIT WORKUP</div><div>CBC, BMP, UA, Urine culture</div><div>Only if does not delay emergent transfer to emergency department</div></div>	<div><div>SUGGESTED WORKUP</div><div>CT abdomen (preferred) or KUB or renal US</div><div>CBC, BMP, UA</div><div>Consider aAlpha blockers for ureteral stones, especially distal stones</div><div>Symptomatic pain and nausea control as needed</div><div>If patient pass stone, send stone for analysis</div></div>	<div><div>SUGGESTED MANAGEMENT</div><div>CT abdomen (preferred) or KUB or renal US</div><div>CBC, BMP, UA</div><div>Symptom control and observation for up to 4-6 weeks if patient agreeable</div><div>Consider alpha blockers, especially in distal ureter</div><div>Offer reimaging to patients to verify passage of stones at 4-6 weeks or if stone movement will change management. Reimaging should focus on the region of interest and limit radiation exposure to uninivolved regions</div><div>If stone passed, send for analysis</div><div>If pain cannot be controlled, emergent signs develop or patient desires intervention, Consult Urology</div></div>

## CLINICAL PEARLS

- Majority of stones less than or equal to 5 will pass spontaneously, but these numbers refer to success rates at 6 weeks. Patients may or may not be willing to wait that long.
- Smaller asymptomatic renal stones, especially in the lower pole of the kidney may not need intervention, but a discussion of risk and benefits of observation vs. intervention is advised
